

Here's what's new in *GAGEpack*!

Up to 10 customized toolbars for calibration, inventory management, MSA, or even individual technicians, so that each user can personalize his/her main screen

A new Verification Event that allows you to perform a verification between calibrations to verify that a gage is still in calibration. This is similar to a calibration event except that it does not affect the calibration due date

An enhanced maintenance section (PM tasks) that allows you to track any number of individual maintenance actions per gage

An Upgrade Wizard allows you to transfer all of your settings from a previous *GAGEpack* installation for a seamless upgrade of both the gage and choice list databases

A new lockout function adds tightened security that can lock *GAGEpack* against intruders if a PC is to be left unattended

A customizable tool bar that allows you to select the buttons that you use the most

A new startup feature that allows you to see at a glance what activities are coming up

Wear trend analysis to help you estimate when a gage is likely to go out of calibration

Additional worksheets to make collecting data for R&R studies easier

Even more label printing options for R&R and maintenance

Enhanced email that allows you to specify a recipient or distribution list for each gage

A catalog view that includes images of the gages so that you can quickly identify instruments

A variety of management statistics and charts, including line and Pareto charts, so that you can monitor costs and failure rates.

A clone option that enables you to quickly add multiple gages to the inventory by 'cloning' an existing gage multiple times

One-click, on-demand database backup that enables the current database to be backed up immediately while *GAGEpack* is running

An even easier import wizard that allows complex imports to be memorized and then recalled

Preventive maintenance (PM) scheduling that allows you to record and schedule maintenance activities

A drag and drop report designer

A View Only mode so that users can view gages without compromising security

The ability to tell at a glance if a gage is available for use

Barcode scanner support to make adding gage events easy and error free

The MSA calculations specified in the third edition of AIAG's *Measurement Systems Analysis* manual

A calendar to view calibration events and due dates at a glance

More than 100 reports and the ability to easily create your own using the "click and pick" report wizard
